

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OEM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

Note: This product is being discontinued. You cannot order parts after May 14, 2008. Xilinx recommends replacing XC95144XV devices with equivalent XC95144XL devices in all designs as soon as possible. Recommended replacements are pin compatible, however require a V_{CC} change to 3.3V, and a recompile of the design file. In addition, there is no 1.8V I/O support, and only one output bank is supported. See [XC907010](#) for details regarding this discontinuation, including device replacement recommendations for the XC95144XV CPLD.

Features

- 144 macrocells with 3,200 usable gates
- Available in small footprint packages
 - 100-pin TQFP (81 user I/O pins)
 - 144-pin TQFP (117 user I/O pins)
 - 144-pin CSP (117 user I/O pins)
- Optimized for high-performance 2.5V systems
 - Low power operation
 - Multi-voltage operation
- Advanced system features
 - In-system programmable
 - Two separate output banks
 - Superior pin-locking and routability with Fast CONNECT™ II switch matrix
 - Extra wide 54-input Function Blocks
 - Up to 90 product-terms per macrocell with individual product-term allocation
 - Local clock inversion with three global and one product-term clocks
 - Individual output enable per output pin
 - Input hysteresis on all user and boundary-scan pin inputs
 - Bus-hold circuitry on all user pin inputs
 - Full IEEE Standard 1149.1 boundary-scan (JTAG)
- Fast concurrent programming
- Slew rate control on individual outputs
- Enhanced data security features
- Excellent quality and reliability
 - 20 year data retention
 - ESD protection exceeding 2,000V

Description

The XC95144XV is a 2.5V CPLD targeted for high-performance, low-voltage applications in leading-edge communications and computing systems. It is comprised of eight 54V18 Function Blocks, providing 3,200 usable gates with propagation delays of 5 ns.

Power Estimation

Power dissipation in CPLDs can vary substantially depending on the system frequency, design application and output loading. To help reduce power dissipation, each macrocell in a XC9500XV device may be configured for low-power mode (from the default high-performance mode). In addition, unused product-terms and macrocells are automatically deactivated by the software to further conserve power.

For a general estimate of I_{CC} , the following equation may be used:

$$P_{TOTAL} = P_{INT} + P_{IO} = I_{CCINT} \times V_{CCINT} + P_{IO}$$

Separating internal and I/O power here is convenient because XC9500XV CPLDs also separate the corresponding power pins. P_{IO} is a strong function of the load capacitance driven, so it is handled by $I = CVf$. I_{CCINT} is another situation that reflects the actual design considered and the internal switching speeds. An estimation expression for I_{CCINT} (taken from simulation) is:

$$I_{CCINT}(mA) = MC_{HS}(0.122 \times PT_{HS} + 0.238) + MC_{LP}(0.042 \times PT_{LP} + 0.171) + 0.04(MC_{HS} + MC_{LP}) \times f_{MAX} \times MC_{TOG}$$

where:

MC_{HS} = # macrocells used in high speed mode

MC_{LP} = #macrocells used in low power mode

PT_{HS} = average p-terms used per high speed macrocell

PT_{LP} = average p-terms used over low power macrocell

f_{MAX} = max clocking frequency in the device

MC_{TOG} = % macrocells toggling on each clock (12% is frequently a good estimate)

This calculation was derived from laboratory measurements of an XC9500XV part filled with 16-bit counters and allowing a single output (the LSB) to be enabled. The actual I_{CC} value varies with the design application and should be verified during normal system operation. [Figure 1](#) shows the above estimation in a graphical form. For a more detailed discussion of power consumption in this device, see Xilinx

Supported I/O Standards

Table 1: IOSTANDARD Options

IOSTANDARD	V _{CCIO}
LVTTL	3.3V
LVCMS2	2.5V
X25TO18	1.8V

The XC95144XV CPLD features both LVCMOS and LVTTL I/O implementations. See Table 1 for I/O standard voltages. The LVTTL I/O standard is a general purpose EIA/JEDEC standard for 3.3V applications that use an LVTTL input buffer and Push-Pull output buffer. The LVCMOS2 standard is used in 2.5V applications.

XC9500XV CPLDs are also 1.8V I/O compatible. The X25TO18 setting is provided for generating 1.8V compatible outputs from a CPLD normally operating in a 2.5V environ-

ment. The ISE software automatically groups outputs with matching IOSTANDARD settings into the same V_{CCIO} bank when no location constraints are specified. The default I/O

Standard for pads without IOSTANDARD attributes is LVTTTL for XC9500XV devices.

Absolute Maximum Ratings

Symbol	Description	Value	Units
V_{CC}	Supply voltage relative to GND	–0.5 to 2.7	V
V_{CCIO}	Supply voltage for output drivers	–0.5 to 3.6	V
V_{IN}	Input voltage relative to GND ⁽¹⁾	–0.5 to 3.6	V
V_{TS}	Voltage applied to 3-state output ⁽¹⁾	–0.5 to 3.6	V
T_{STG}	Storage temperature (ambient)	–65 to +150	°C
T_J	Junction temperature	+150	°C

Notes:

1. Maximum DC undershoot below GND must be limited to either 0.5V or 10 mA, whichever is easier to achieve. During transitions, the device pins may undershoot to –2.0V or overshoot to +3.6V, provided this over- or undershoot lasts less than 10 ns and with the forcing current being limited to 200 mA.
2. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those listed under Operating Conditions is not implied. Exposure to Absolute Maximum Ratings conditions for extended periods of time may affect device reliability.
3. For solder specifications, see [Xilinx Packaging](#).

XC95144XV-7CS144I	7.5 ns	CS144	144-ball	Chip Scale Package (CSP)	I

Notes:

1. C = Commercial: $T_A = 0^\circ$ to $+70^\circ\text{C}$; I = Industrial: $T_A = -40^\circ$ to $+85^\circ\text{C}$
2. Some packages available in Pb-free option. See [Xilinx Packaging](#) for more information.

Revision History

The following table shows the revision history for this document..

Date	Version	Revision
06/28/00	1.0	Initial Xilinx release. Advance information specification.
01/25/01	2.0	Added -4 performance specifications. Updated I_{CC} vs. Frequency Figure 1 .
05/15/01	2.1	Updated I_{CC} formula, Recommended Operation Conditions, -4 and -5 AC Characteristics and Internal Timing Parameters
08/27/01	2.2	Changed V_{CCIO} 3.3V from 3.13 to 3.0 (min), 3.46 to 3.60 (max); DC characteristics: I_{IL} - added "low" current, I_{IH} - changed to "Input leakage high current"; Internal Timing: -5 T_{AOI} from 6.5 to 5.9.
06/20/02	2.3	Updated I_{CC} equation on page 1. Updated Component Availability chart. Changed to Preliminary. Added second test condition and max measurement to I_{IH} DC Characteristics. Added Part Marking Information to Ordering Information. Removed -4 device.
06/25/02	2.4	Fixed Note 1 in XC95144XV Global, JTAG and Power Pins table.
01/08/03	2.5	Corrected link on first page.
06/18/03	2.6	Updated T_{SOL} from 260 to 220°C. Updated Device Part Marking.
08/21/03	2.7	Updated Package Device Marking Pin 1 orientation.
04/15/05	2.8	Added T_{APRPW} specification to AC Characteristics. Added IOSTANDARD information.
06/25/07	3.0	Notice of discontinuance.
