

REVISIONS

LTR	DESCRIPTION	DATE (YR-MO-DA)	APPROVED
A	Redraw with changes. Converted drawing to one part-one number SMD format. Added package, outline letters Z and U. Added devices 03 and 04.	93-09-14	Michael A. Frye
B	Added case outline T. Made format changes, editorial changes throughout	93-11-19	Michael A. Frye
C	Added case outlines M, N, and 9. Editorial changes throughout.	94-06-06	Michael A. Frye
D	Changes in accordance with NOR 5962-R008-96.	95-11-03	Michael A. Frye
E	Changes in accordance with NOR 5962-R004-97.	96-10-04	Ray Monnin
F	Update drawing to current requirements. Editorial changes throughout. - gap	02-02-01	Ray Monnin
G	Boilerplate update, part of 5 year review. ksr	08-05-16	Robert M. Heber
H	Update to reflect current MIL-PRF-38535 requirements. - llb	16-10-20	Charles F. Saffle

		SHEET		1 OF 32																	

1. SCOPE

1.1 Scope. This drawing documents two product assurance class levels consisting of high reliability (device class Q and M) and space application (device class V). A choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels is reflected in the PIN.

1.2 PIN. The PIN is as shown in the following example:

1.2.1 RHA designator. Device classes Q and V RHA marked devices meet the MIL-PRF-38535 specified RHA levels and are marked with the appropriate RHA designator. Device class M RHA marked devices meet the MIL-PRF-38535, appendix A specified RHA levels and are marked with the appropriate RHA designator. A dash (-) indicates a non-RHA device.

1.2.2 Device types. The device types identify the circuit function as follows:

<u>Device type</u>	<u>Generic number</u>	<u>Circuit function</u>	<u>Toggle Speed</u>
01	3020-50	8 x 8 2000 gate programmable array	50 MHz
02	3020-70	8 x 8 2000 gate programmable array	70 MHz
03	3020-100	8 x 8 2000 gate programmable array	100 MHz
04	3020-125	8 x 8 2000 gate programmable array	125 MHz

1.2.3 Device class designator. The device class designator is a single letter identifying the product assurance level as follows:

<u>Device class</u>	<u>Device requirements documentation</u>
M	Vendor self-certification to the requirements for MIL-STD-883 compliant, non-JAN class level B microcircuits in accordance with MIL-PRF-38535, appendix A
Q or V	Certification and qualification to MIL-PRF-38535

1.2.4 Case outlines. The case outlines are as designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>
X	CMGA15-PN	84 ^{1/}	Pin grid array package
Y	See figure 1	100	Quad flat package
Z	CMGA3-PN	84 ^{1/}	Pin grid array package
U	CQCC1-F100	100	Unformed-lead chip carrier ^{2/}
T	See figure 1	100	Quad flat package
M	See figure 1	100	Quad flat package
N	See figure 1	100	Quad flat package
9	See figure 1	100	Quad flat package

1.2.5 Lead finish. The lead finish is as specified in MIL-PRF-38535 for device classes Q and V or MIL-PRF-38535, appendix A for device class M.

^{1/} 84 = actual number of pins used, not maximum listed in MIL-STD-1835.

^{2/} Pin 1 is the middle pin on the side with center justified identifier mark. Mark may be a notch, dot, or triangle.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-89948
		REVISION LEVEL H	SHEET 2

1.3 Absolute maximum ratings. 3/

Supply voltage range to ground potential (V _{CC})	-0.5 V dc to +7.0 V dc
DC input voltage range	-0.5 V dc to V _{CC} +0.5 V dc
Voltage applied to three-state output(V _{TS})	-0.5 V dc to V _{CC} +0.5 V dc
Lead temperature (soldering, 10 seconds)	+260°C
Thermal resistance, junction-to-case (θ _{JC}):	
Case outline X, Z, U, and T	See MIL-STD-1835
Case outlines Y, N, M, 9, and 8	10°C/W 4/
Junction temperature (T _J)	+150°C 5/
Storage temperature range	-65°C to +150°C

1.4 Recommended operating conditions. 6/

Case operating temperature range(T _C)	-55°C to +125°C
Supply voltage relative to ground(V _{CC})	+4.5 V dc minimum to +5.5 V dc maximum
Ground voltage (GND) or (V _{SS})	0 V dc

1.5 Digital logic testing for device classes Q and V.

Fault coverage measurement of manufacturing logic tests in accordance with MIL-PRF-38535	95 percent
------------------------------------------------------------------------------------------------	------------

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard Microcircuits.
 MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.
 MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at <http://quicksearch.dla.mil> or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following document(s) form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation.

JEDEC – SOLID STATE TECHNOLOGY ASSOCIATION (JEDEC)

JESD 78 - IC Latch-Up Test.

(Copies of these documents are available online at <http://www.jedec.org> or from JEDEC – Solid State Technology Association, 3103 North 10th Street, Suite 240-S, Arlington, VA 22201-2107.)

- 3/ Stresses above the absolute maximum rating may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability.
- 4/ When a thermal resistance for this case is specified in MIL-STD-1835 that value shall supersede the value indicated herein.
- 5/ Maximum junction temperature shall not be exceeded except for allowable short duration burn-in screening conditions in accordance with method 5004 of MIL-STD-883.
- 6/ All voltage values in this drawing are with respect to V_{SS}.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-89948
		REVISION LEVEL H	SHEET 3

2.3 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements for device classes Q and V shall be in accordance with MIL-PRF-38535 as specified herein, or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. The individual item requirements for device class M shall be in accordance with MIL-PRF-38535, appendix A for non-JAN class level B devices and as specified herein.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein for device classes Q and V or MIL-PRF-38535, appendix A and herein for device class M.

3.2.1 Case outlines. The case outlines shall be in accordance with 1.2.4 herein and figure 1.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 2.

3.2.3 Logic block diagrams. The block or logic diagrams shall be as specified on figure 3.

3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and postirradiation parameter limits are as specified in table I and shall apply over the full case operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table IIA. The electrical tests for each subgroup are defined in table I.

3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked. For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device. For RHA product using this option, the RHA designator shall still be marked. Marking for device classes Q and V shall be in accordance with MIL-PRF-38535. Marking for device class M shall be in accordance with MIL-PRF-38535, appendix A.

3.5.1 Certification/compliance mark. The certification mark for device classes Q and V shall be a "QML" or "Q" as required in MIL-PRF-38535. The compliance mark for device class M shall be a "C" as required in MIL-PRF-38535, appendix A.

3.6 Certificate of compliance. For device classes Q and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.6.1 herein). For device class M, a certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-HDBK-103 (see 6.6.2 herein). The certificate of compliance submitted to DLA Land and Maritime-VA prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device classes Q and V, the requirements of MIL-PRF-38535 and herein or for device class M, the requirements of MIL-PRF-38535, appendix A and herein.

3.7 Certificate of conformance. A certificate of conformance as required for device classes Q and V in MIL-PRF-38535 or for device class M in MIL-PRF-38535, appendix A shall be provided with each lot of microcircuits delivered to this drawing.

3.8 Notification of change for device class M. For device class M, notification to DLA Land and Maritime-VA of change of product (see 6.2 herein) involving devices acquired to this drawing is required for any change that affects this drawing.

3.9 Verification and review for device class M. For device class M, DLA Land and Maritime, DLA Land and Maritime's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

3.10 Microcircuit group assignment for device class M. Device class M devices covered by this drawing shall be in microcircuit group number 042 (see MIL-PRF-38535, appendix A).

3.11 Operational notes. Additional information shall be provided by the device manufacturer (see 6.6 herein).

				02,03, 04		11	

1/ Tested initially and after any design or process change that may affect this parameter and guaranteed to the limits specified in table I with the following conditions:

Global clock at 16 MHz for device type 01 and 25 MHz for device types 02, 03, and 04.

- 5 outputs at 5 MHz
- 15 outputs at 1 MHz
- Alternate clock at 10 MHz
- 20 configurable logic blocks (CLB) at 5MHz
- 30 CLBs at 1 MHz
- 10 horizontal long lines at 5 MHz
- 10 vertical long lines at 1 MHz
- 15 inputs at 5 MHz
- 3 inputs at 10 MHz

Excessive supply current can occur as a result of internal contention during the initial phase of reconfiguration following a short interruption of V_{CC}. To avoid this excessive current, monitor the dropping of V_{CC} and immediately initiate a reconfiguration, but hold RESET active. This clears the internal configuration register in less than a millisecond, and avoids all later contentions.

2/ PWRDWN transitions must occur during operational V_{CC} levels.

3/ Parameter is not directly tested. Devices are first 100 percent functionally tested. Benchmark patterns (t_{B1-9}) are then used to determine the compliance of this parameter. Characterization data is taken initially and after design or process change which may affect this parameter.

4/ Minimum CLOCK widths for the auxiliary buffer are 1.25 times the t_{CH} and t_{CL}.

5/ These parameters are for clock pulses internal to the chip. Externally applied clock, increases value by 20 percent.

		REVISION LEVEL H	SHEET 21

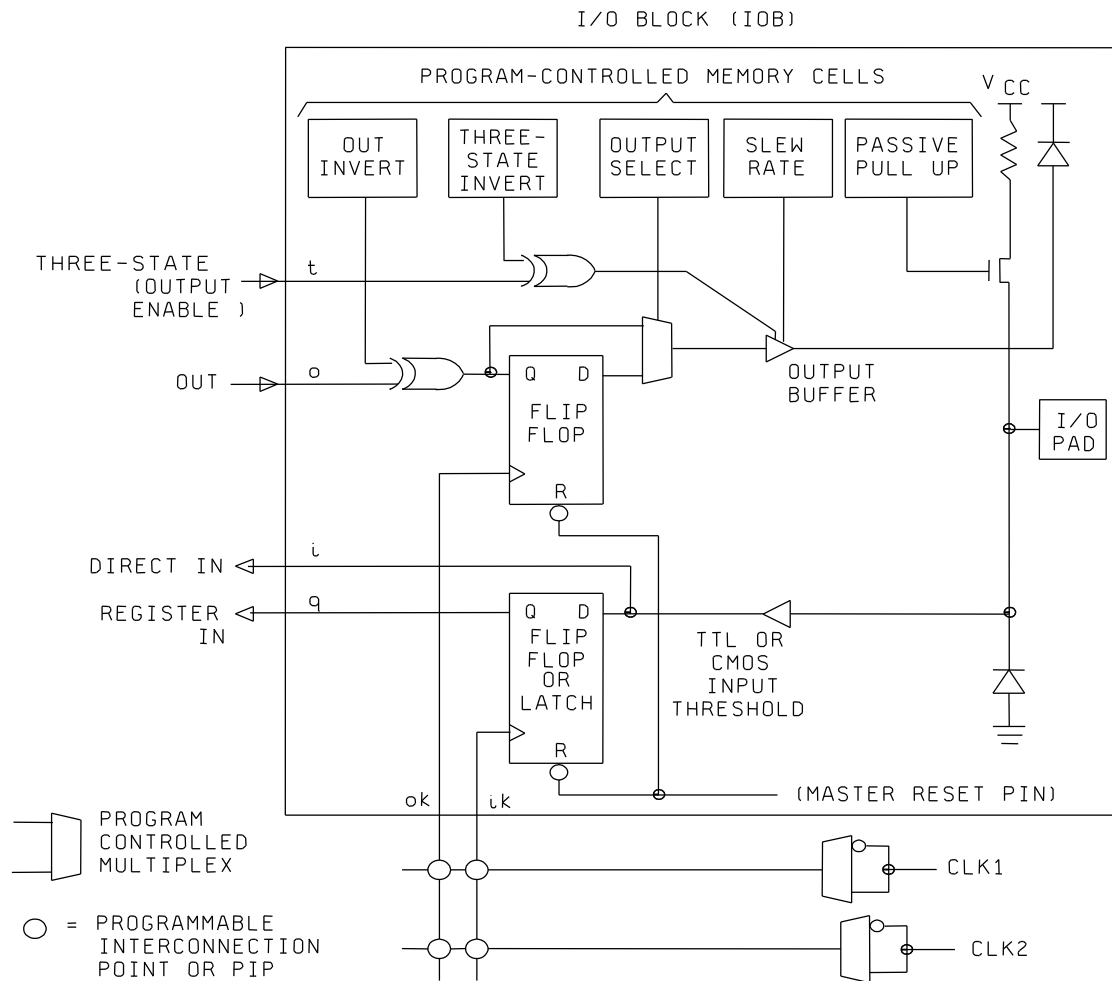

NOTE: Each CLB includes a combinatorial logic section, two flip-flops, and a program memory controlled multiplexer selection of function.

- It has:
- Five logic variable inputs: a, b, c, d, and e
 - A direct data input: di
 - An enable clock: ec
 - A clock (invertible): k
 - An asynchronous reset: rd
 - Two outputs: x and y

FIGURE 3. Logic block diagrams.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-89948
		REVISION LEVEL H	SHEET 22

NOTE: The IOB includes input and output storage elements and I/O options selected by configuration memory cells. A choice of two clocks is available on each die edge. The polarity of each clock line (not each flip-flop or latch) is programmable. A clock line that triggers the flip-flop on the rising edge is an active low latch enable (latch transparent) signal and vice versa. Passive pull-up can only be enabled on inputs, not on outputs. All user inputs are programmed for TTL or CMOS thresholds.

FIGURE 3. Logic block diagrams – Continued.

		REVISION LEVEL H	SHEET 23

GENERAL LOGIC CELL ARRAY (LCA) SWITCHING CHARACTERISTICS

NOTE: All timings except t_{TSHZ} and t_{TSON} are measured at 1.5 V levels with 50 pF minimum output load. For input signals, rise and fall times are less than 6.0 ns, with low amplitude = 0 V, and high amplitude = 3.0 V.

FIGURE 4. Timing diagrams and switching characteristics.

		REVISION LEVEL H	SHEET 25

I/O BLOCK (IOB) SWITCHING CHARACTERISTICS

NOTE: t_{TSHZ} is determined when the output shifts 10 percent (of the output voltage swing) from V_{OL} level or V_{OH} level. See figure 5, circuit B herein for circuit used. t_{TSON} is measured at 0.5 V_{CC} level with $V_{IN} = 0.0$ V for three-state to active High, and $V_{IN} = V_{CC}$ for three-state to active low. See figure 5, circuit A herein for circuit used.

4. VERIFICATION

4.1 Sampling and inspection. For device classes Q and V, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. For device class M, sampling and inspection procedures shall be in accordance with MIL-PRF-38535, appendix A.

4.2 Screening. For device classes Q and V, screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. For device class M, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection.

4.2.1 Additional criteria for device class M.

- a. Delete the sequence specified as initial (pre-burn-in) electrical parameters through interim (post-burn-in) electrical parameters of method 5004 and substitute lines 1 through 6 of table IIA herein.
- b. Burn-in test, method 1015 of MIL-STD-883.
 - (1) The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
 - (2) $T_A = +125^\circ\text{C}$, minimum.
- b. Interim and final electrical test parameters shall be as specified in table IIA herein.

4.2.2 Additional criteria for device classes Q and V.

- a. The burn-in test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document revision level control of the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table IIA herein.
- c. Additional screening for device class V beyond the requirements of device class Q shall be as specified in MIL-PRF-38535, appendix B.

4.3 Qualification inspection for device classes Q and V. Qualification inspection for device classes Q and V shall be in accordance with MIL-PRF-38535. Inspections to be performed shall be those specified in MIL-PRF-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

4.4 Conformance inspection. Technology conformance inspection for classes Q and V shall be in accordance with MIL-PRF-38535 including groups A, B, C, D, and E inspections, and as specified herein. Quality conformance inspection for device class M shall be in accordance with MIL-PRF-38535, appendix A and as specified herein. Inspections to be performed for device class M shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

4.4.1 Group A inspection.

- a. Tests shall be as specified in table IIA herein.
- b. Subgroups 5 and 6 of table I of method 5005 of MIL-STD-883 shall be omitted.
- c. For device class M, subgroups 7 and 8 tests shall be sufficient to verify the truth table. For device classes Q and V, subgroups 7, 8A, and 8B shall include verifying the functionality of the device; these tests shall have been fault graded in accordance with method 5012 of MIL-STD-883 (see 1.5 herein).

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-89948
		REVISION LEVEL H	SHEET 28

- d. O/V (latch-up) tests shall be measured only for initial qualification and after any design or process changes which may affect the performance of the device. For device class M, procedures and circuits shall be maintained under document revision level control by the manufacturer and shall be made available to the preparing activity or acquiring activity upon request. For device classes Q and V, the procedures and circuits shall be under the control of the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the preparing activity or acquiring activity upon request. Testing shall be on all pins, on five devices with zero failures. Latch-up test shall be considered destructive. Information contained in JESD 78 may be used for reference.
- e. Subgroup 4 (C_{IN} and C_{OUT} measurements) shall be measured only for initial qualification and after any process or design changes which may affect input or output capacitance. Capacitance shall be measured between the designated terminal and GND at a frequency of 1 MHz. Sample size is five devices with no failures, and all input and output terminals tested.

4.4.2 Group C inspection. The group C inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.2.1 Additional criteria for device class M. Steady-state life test conditions, method 1005 of MIL-STD-883:

- a. Test condition D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.
- b. $T_A = +125^\circ\text{C}$, minimum.
- c. Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

4.4.2.2 Additional criteria for device classes Q and V. The steady-state life test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The test circuit shall be maintained under document revision level control by the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.

4.4.3 Group D inspection. The group D inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.4 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein).

- a. End-point electrical parameters shall be as specified in table IIA herein.
- b. For device classes Q and V, the devices or test vehicle shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535 for the RHA level being tested. For device class M, the devices shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535, appendix A for the RHA level being tested. All device classes must meet the postirradiation end-point electrical parameter limits as defined in table I at $T_A = +25^\circ\text{C} \pm 5^\circ\text{C}$, after exposure, to the subgroups specified in table IIA herein.
- c. When specified in the purchase order or contract, a copy of the RHA delta limits shall be supplied.

4.5 Delta measurements for device classes Q and V. Delta measurements, as specified in table IIA, shall be made and recorded before and after the required burn-in screens and steady-state life tests to determine delta compliance. The electrical parameters to be measured, with associated delta limits are listed in table IIB. The device manufacturer may, at his option, either perform delta measurements or within 24 hours after life test perform final electrical parameter tests, subgroups 1, 7, and 9.

Line no.	Test requirements	Subgroups (in accordance with MIL-STD-883, method 5005, table I)	Subgroups (in accordance with MIL-PRF-38535, table III)	
		Device class M	Device class Q	Device class V
1	Interim electrical parameters (see 4.2)		1, 7, 9	1, 7, 9
2	Static burn-in (method 1015)	Required	Required	Required
3	Same as line 1			1*, 7* Δ
4	Dynamic burn-in (method 1015)	Not required	Not required	Not required
5	Final electrical parameters	1*, 2, 3, 7*, 8A, 8B, 9, 10, 11	1*, 2, 3, 7*, 8A, 8B, 9, 10, 11	1*, 2, 3, 7*, 8A, 8B, 9, 10, 11
6	Group A test requirements	1, 2, 3, 4**, 7, 8A, 8B, 9, 10, 11	1, 2, 3, 4**, 7, 8A, 8B, 9, 10, 11	1, 2, 3, 4**, 7, 8A, 8B, 9, 10, 11
7	Group C end-point electrical parameters	2, 3, 7, 8A, 8B	1, 2, 3, 7, 8A, 8B	1, 2, 3, 7, 8A, 8B, 9, 10, 11 Δ
8	Group D end-point electrical parameters	2, 3, 8A, 8B	2, 3, 8A, 8B	2, 3, 8A, 8B
9	Group E end-point electrical parameters	1, 7, 9	1, 7, 9	1, 7, 9

- 1/ Blank spaces indicate tests are not applicable.
 2/ Any or all subgroups may be combined when using high-speed testers.
 3/ Subgroups 7, 8A, and 8B functional tests shall verify the truth table.
 4/ * indicates PDA applies to subgroup 1 and 7.
 5/ ** see 4.4.1e.
 6/ Δ indicates delta limit (see table IIB) shall be required where specified, and the delta values shall be computed with reference to the previous interim electrical parameters (see line 1).
 7/ See 4.4.1d.

TABLE IIB. Delta limits at +25°C.

Parameter 1/	Device types
	All
I _{CCO} standby	± 300 μA
I _{IL} , I _{OL}	± 2 nA

- 1/ The above parameter shall be recorded before and after the required burn-in and life tests to determine the delta Δ

		REVISION LEVEL H	SHEET 30

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535 for device classes Q and V or MIL-PRF-38535, appendix A for device class M.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor prepared specification or drawing.

6.1.2 Substitutability. Device class Q devices will replace device class M devices.

6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.3 Record of users. Military and industrial users should inform DLA Land and Maritime when a system application requires configuration control and which SMD's are applicable to that system. DLA Land and Maritime will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DLA Land and Maritime-VA, telephone (614) 692-8108.

6.4 Comments. Comments on this drawing should be directed to DLA Land and Maritime-VA, Columbus, Ohio 43218-3990, or telephone (614) 692-0540.

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535, MIL-HDBK-1331, and as follows.

PWRDWN	POWER-DOWN.
MO	MODE 0.
RTRIG	READ TRIGGER.
M1	MODE 1.
RDATA	READ DATA.
M2	MODE 2.
HDC	HIGH DURING CONFIGURATION.
LDC	LOW DURING CONFIGURATION
RESET	RESET
DONE	DONE
PG	PROGRAM
BCLKIN	BCLKIN
XTL1	EXTERNAL CRYSTAL
XTL2	EXTERNAL CRYSTAL
CCLK	CONFIGURATION CLOCK
DOUT	DATA OUT
DIN	DATA IN
CS0	CHIP SELECT, WRITE.
CS1	CHIP SELECT, WRITE.
CS2	CHIP SELECT, WRITE.
WS	CHIP SELECT, WRITE.
RCLK	READ CLOCK.
RDY/BUSY	During peripheral parallel mode configuration, this pin indicates when the chip is ready for another byte of data to be written into it. After configuration is complete, this pin becomes a user programmed I/O pin.
TCLKIN	TCLKIN
INIT	INIT
D0-D7	DATA
A0-A15	ADDRESS
I/O	INPUT/OUTPUT(DEDICATED).
V _{cc}	+5.0 V SUPPLY VOLTAGE.
GND	GROUND

6.6 Additional operating data.

- a. Power on delay is 2^{14} cycles from the non-master mode. This provides 11 to 33 ms of wait time.
- b. Power on delay is 2^{16} cycles for the master mode. This provides 43 to 130 ms of wait time.
- c. Clear is 375 cycles \pm 25 cycles and may take as long as 250 to 750 μ s.
- d. During normal power up, V_{CC} must rise from 2.0 V to V_{CC} minimum in less than 10 ms. If this does not occur, configuration must be delayed by using RESET.

6.7 Sources of supply.

6.7.1 Sources of supply for device classes Q and V. Sources of supply for device classes Q and V are listed in MIL-HDBK-103 and QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.6 herein) to DLA Land and Maritime-VA and have agreed to this drawing.

6.7.2 Approved sources of supply for device class M. Approved sources of supply for class M are listed in MIL-HDBK-103. The vendors listed in MIL-HDBK-103 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DLA Land and Maritime-VA.

6.8 Supersession Data.

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 16-10-20

Approved sources of supply for SMD 5962-89948 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DLA Land and Maritime-VA. This information bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535. DLA Land and Maritime maintains an online database of all current sources of supply at <https://www.landandmaritimeapps.dla.mil/Programs/Smcr/>.
